

## Tips for Working with Designer Prints™ decorations

Under extreme conditions, such as high humidity, a Designer Prints™ decoration may be difficult to peel from the backing sheet. If you are having issues peeling your Designer Prints™ decorations, try these tips.

### Designer Prints™

- Place one sheet in the freezer for 30 to 90 seconds.
- Gently roll the backing sheet over the edge of a table or counter starting at the edge of the first strip (with image facing up).
- Peel the first strip off the backing sheet.
- Put the sheet with the remaining strip(s) back in the freezer, and repeat the process until you have removed all the Designer Prints™ you need.

### Additional Troubleshooting Tips

- Save a backing sheet, and use it to slide under Edible Image® design to loosen from other backing sheets.
- If buttercream has formed a crust, spray with a fine mist of water before applying the image.
- DO NOT ADD extra moisture to non-dairy whipped toppings.
- Add a generous mist of water over royal icing.
- For fondant only, add a slight misting of water where you will be placing an Edible Image® design.
- If you are frequently having issues removing Edible Image® designs from their backing sheets, call Lucks to order desiccant packs.

### Ice Cream Cake Tip

If your ice cream cake is covered in a thin layer of ice crystal, let it sit out for a few minutes. This will allow the thin layer of ice to soften and provide the needed moisture for the Designer Prints™ to adhere to the side of the cake.
